Observatory for Management Companies

2026 Barometer

alfi association of the luxembourg fund industry

pwc

Foreword

The PwC Observatory for Management Companies (ManCos), also known as the ManCo Poster, charts the evolution of Luxembourg's ManCo landscape by combining historical data with forward-looking insights. Developed and published by PwC Luxembourg, it has also served as the basis for a dedicated ALFI/PwC-branded edition since 2024, released by ALFI with PwC Luxembourg's permission.

Now in its 11th edition, the Observatory builds on the strong foundations of previous editions, helping ManCos navigate an environment that remains both dynamic and demanding.

ManCos continue to play a central role in supporting the Asset Management industry, demonstrating resilience and adaptability in an evolving global context. While the number of ManCos has gradually decreased, reflecting ongoing market consolidation driven by merger and acquisition activity and cost pressures, 7 new AIFMs were registered in Luxembourg in 2025. The industry continues to see growth in full-time headcount (FTEs), reflecting a continued reinforcement of local substance and expertise across Luxembourg ManCos. Assets under management continue their upward trajectory, driven by strong market performance and the expansion of alternative investment strategies. Backed by expanding product sophistication and deep expertise, Luxembourg continues to strengthen its position as Europe's premier ManCo hub.

Governance frameworks continue to evolve in response to heightened regulatory expectations. Independent oversight at board level is being further reinforced, with an increasing emphasis on effective challenge and accountability. Particular attention is given to valuation processes and assessments, which remain under close regulatory scrutiny. Expectations from the CSSF mainly focus on the independence of valuation functions, the robustness of controls, especially for illiquid and complex assets, and enhanced governance over valuation/pricing methodologies. In this context, a growing number of ManCos are leveraging third-party valuation specialists to access specialised expertise and strengthen the reliability of their valuation frameworks and assessments. In parallel, ManCos expand new branch structures, primarily to support marketing and distribution activities, and reflecting a growing need for proximity to key markets and a structured approach to cross-border distributions.

ManCos are reshaping their role within the asset management ecosystem as they navigate a more demanding regulatory landscape and heightened competitive pressure. This transformation is characterised by a strategic rebalancing between insourcing key functions, where control, expertise, and value generation are critical, and outsourcing operational activities to both group entities and specialised third-party providers. This approach enables ManCos to enhance their efficiency, access specialised capabilities, and maintain flexibility in an increasingly complex environment. Third-party ManCos continue to play a key role in the ecosystem, offering integrated solutions that allow asset managers to focus on their core activities.

Digital transformation has now become a strategic imperative across the sector: the question is no longer whether to transform, but how to execute effectively. Cloud emerges as the foundation for digital transformation, providing the scalable and secure infrastructure required to support innovation, while simultaneously introducing stricter regulatory and governance requirements. At the same time, data remains the cornerstone of successful digital initiatives, facing ongoing challenges around quality, standardisation and accessibility. Artificial Intelligence adoption is accelerating, primarily driven by the pursuit of productivity gains and operational efficiency. While use cases are rapidly expanding into compliance, risk management and client-facing activities, organisations are still navigating important challenges related to data reliability, governance and skills.

As such, the digital transformation is entering a new phase where success depends on balancing innovation with robust governance, sustainable operating models and having the right skills and people in place. Although these forces are reshaping operating models across the industry, they are also creating new opportunities, notably in private markets, which remain a key growth driver. In an environment marked by sustained cost pressures and increasing regulatory complexity, ManCos must remain agile, resilient and forward-looking.

Looking ahead, the outlook for the sector remains positive, supported by continued demand for well-governed, scalable and cross-border investment structures. In this context, Luxembourg ManCos are further strengthening their role as centres of excellence, leveraging their expertise, robust governance frameworks and strategic positioning to deliver high-value services.

One constant remains: Luxembourg's ability to adapt, innovate and deliver within an increasingly demanding environment. The 2026 Barometer once again confirms the central role played by ManCos in supporting the growth and transformation of the asset management industry, highlighting the importance of resilience and adaptability in maintaining long-term competitiveness.

Our sample

The 2026 edition marks the eleventh release of the Observatory for Management Companies. This publication provides a comprehensive overview of Luxembourg's Management Companies (ManCo) landscape, covering UCITS Management Companies, Alternative Investment Fund Managers (AIFMs), and Super ManCos, holding both UCITS and AIFM licences.

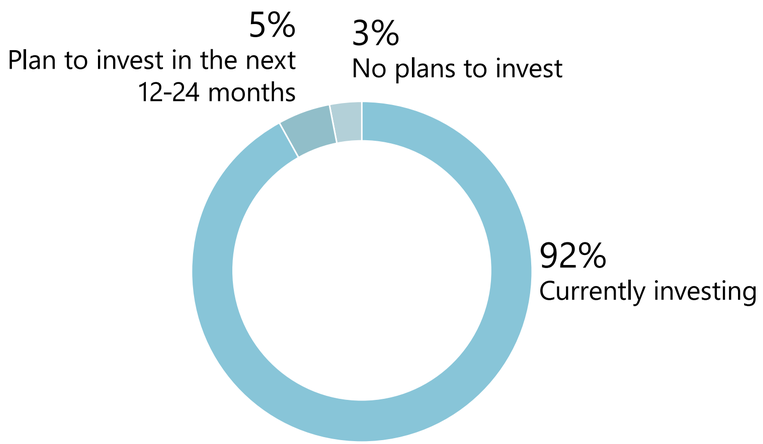
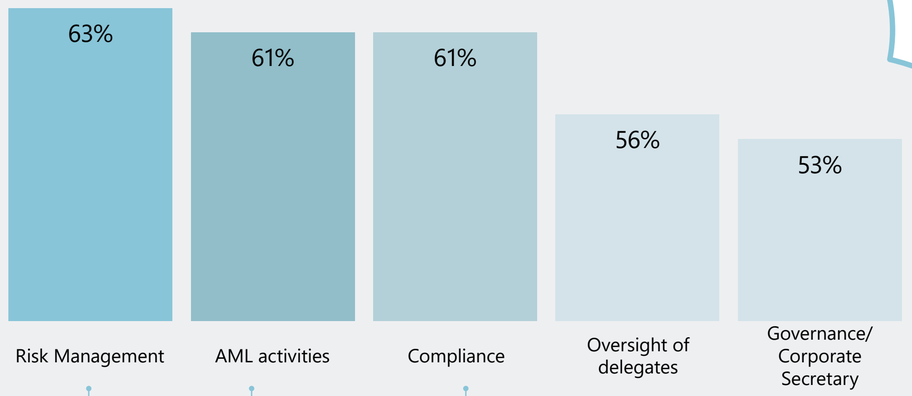
Automatised manual/ repetitive tasks	Enhancing data quality	Access to new tools	Strengthening internal governance and controls	Support business growth

Where do ManCos stand today?

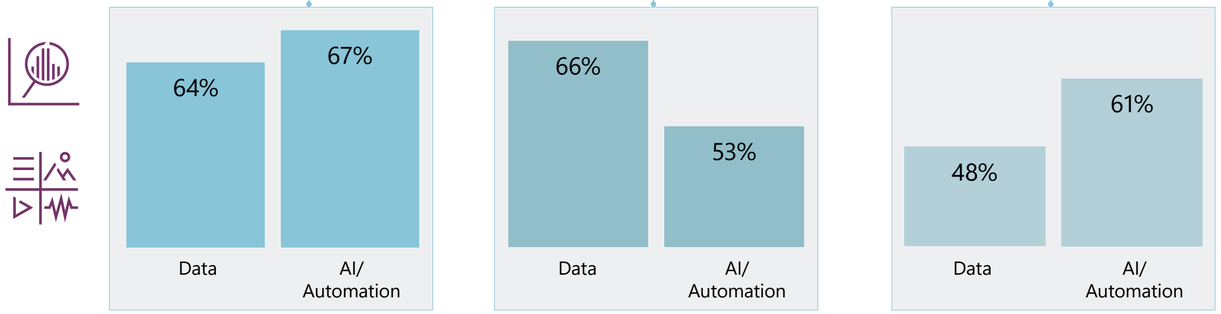


Top 5 functions impacted by digital transformation

Cloud is a critical enabler of digital transformation, providing the secure, scalable, and governed cloud environment required to support innovation and business growth



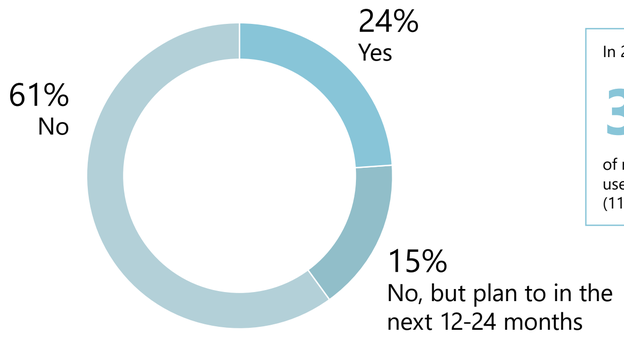
How digital transformation happens across the top 3 functions



Source: PwC ManCo Survey 2026

Digital transformation strategy

Use of the Investment Tax Credit for digital transformation

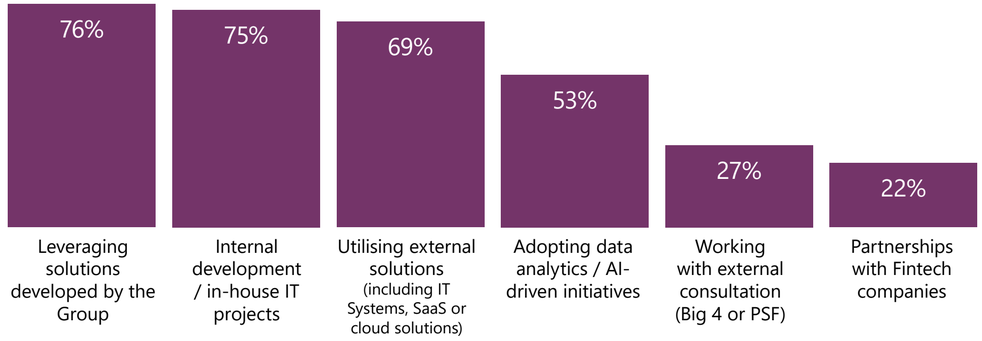


In 2025,

39%

of respondents are using or planning to use the ITC for digital transformation. (11% in 2024)

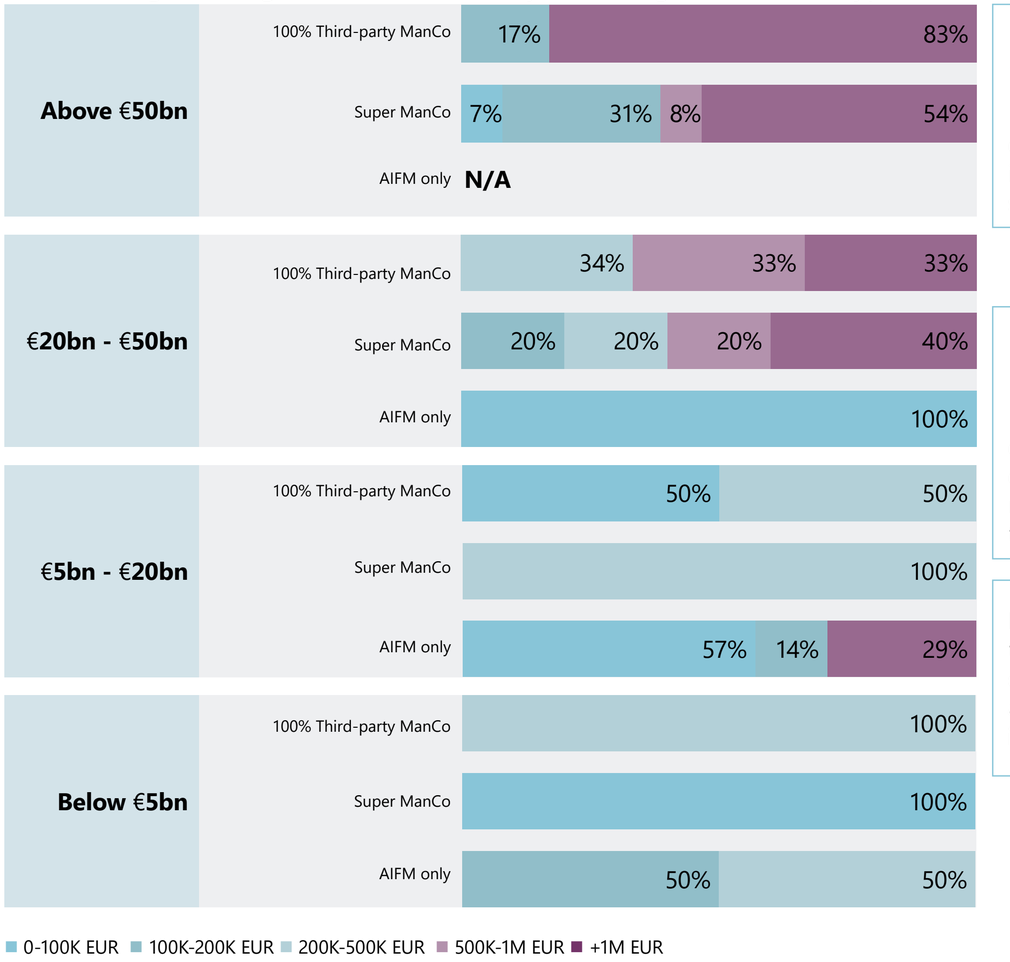
Strategies to implement digital transformation



Despite the convergence of wealth management and FinTech solutions being the number one trend identified by Europeans asset managers as having the greatest impact on revenue growth by 2030*,

only **22%** of respondents utilise partnerships with Fintech companies

Annual budget for digital transformation by AuM range and ManCo type



42%

of ManCos where digitalisation is driven by group or head office spend over €1mn

50%

of ManCos have defined or partially defined KPIs to measure the impact of digital transformation

Main benefits of the total digital transformation are **improved data quality, consistency and accessibility** (81%) and **improved reporting** (73%)

*Note: According to PwC AWM Revolution 2025
Source: PwC ManCo Survey 2026, PwC AWM Revolution 2025

Cloud: the technological foundation

ManCos' top 3 cloud related priorities over the next two years

01 **44%** **Leveraging cloud for artificial intelligence/ machine learning capabilities and automation**

02 **36%** **Cloud compliance with DORA, NIS2, and CSSF requirements**

03 **36%** **Modernising applications to be cloud-native**

Cloud priorities reflect a "build for the future, stay compliant" posture

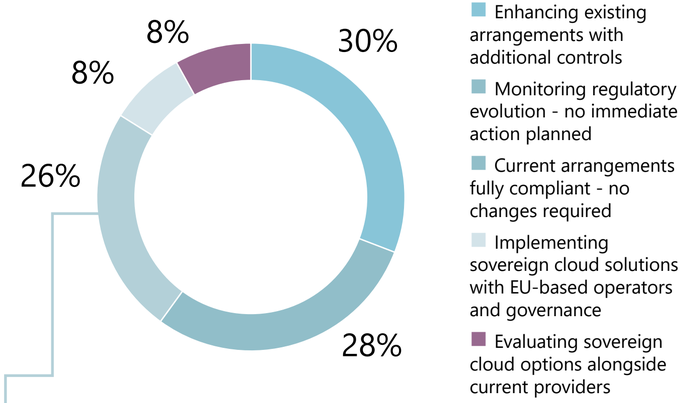
ManCos are concentrating their cloud investments on what generates value (AI/ML capabilities) and what is non-negotiable (regulatory compliance), a natural response for organisations navigating simultaneous strategic and regulatory pressure. Yet as AI/ML adoption grows, so will cloud spending, making cloud cost management and optimisation governance a discipline worth embedding early in the journey.

58% of European asset managers identified development of cloud infrastructure and technology as a top priority*

More than **50%** of ManCos are focusing on Cloud transformation

51% of ManCos are implementing GenAI through development on Cloud (e.g. AWS Bedrock, Azure AI, Google Gemini, etc.)

Geopolitical concerns influence on ManCos' cloud strategy



8% of ManCos are implementing sovereign cloud solutions with EU-based operators and governance

While, **82%** of organisations are already refining their cloud approach in response to geopolitical and regulatory change, with sovereign cloud options increasingly being considered**
